

A WYZER CLASS

CLASS 3 SCREWS NEW ARRIVALS

Protective coatings are placed on fasteners to prevent their weakening over time from the effects of corrosion.

Class 3 is suitable for most external applications that are at least 1.0km from sea water (for example with installing roofing screws in a mildly corrosive environment).

Due to customer demand WYZE Fasteners have introduced an expanded range of Class 3 Hex Head screws suitable for use for fixing to both steel and timber. Because of the generally mildly corrosive environment in many parts of inland Australia, Class 3 screws are suitable for a wide range of applications including roofing and other outdoor fixings that are at least 1.0 kilometre from the sea and intensive industrial areas.

The addition of more sizes of Hex Head screws to the WYZE Fasteners range complements our existing Class 3 products, which includes Button Heads, Countersunk Wing Tips, Wafer Heads and a number of other styles of screws for varied applications in both steel and timber.
